

Bug Id	FAC_BR_001
Title	The Factorial Calculator App fails to handle negative integer inputs.
Reporter	T. Thulo
URL	https://qainterview.pythonanywhere.com/
Operating System	Ubuntu 23.04
Browser	Firefox 134.0 (64-bit) Chrome Version 131.0.6778.264 (Official Build) (64-bit)
Severity	Critical
Priority	High
Submit Date	13/01/2024

Description:

The Factorial App provides no response or feedback when prompted with a negative integer, leaving the user without guidance on valid input requirements.

Steps To Reproduce:

1. Navigate to <https://qainterview.pythonanywhere.com/>
2. Click on the text box labeled “Enter an integer” .
3. Enter any negative integer (e.g., -12).
4. Click on the “Calculate!” button.

Expected Result:

The App should display or communicate an error message to the user that they should only prompt or use positive integers as Factorials only work with positive integers.

Actual Result:

The App doesn’t display or communicate any error messages when negative integers are used as inputs , leaving the user without guidance on valid input requirements.
